# Care Assignments
Logging Care

Logging care is an important step to capturing a complete picture of the care we provide to our residents. Tracking non-alert care is a crucial step to adjusting care plans, following regulatory compliance, and providing a clear continuity of care from shift to shift.
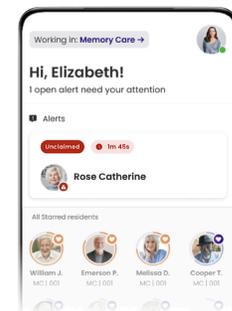

⊕ Adding Residents

- From the **'Today'** page you will be able to add residents to your daily care assignments.
- Tap **'Add Residents'.**
- Select your care assignments from the list and tap **'Save'**.
- Use the available filters to select groups of residents at a time for faster selection.

Logging Care from the Today Page

- Once you have saved your care assignments for your shift you will see the resident's profile icons displayed prominently on your Today page.
- To quickly log care, **tap on the resident's profile icon** after you finished assisting the resident.
- Next, the resident profile card will appear. Tap **'Log Care'** from this pop up to start the care tracking flow.

Resolving Alerts

- After tapping **'Log Care'**, you will see the "care provided" screen.
- Popular care types you may select from this list are routine and unplanned care such as **Routine Check, Toileting, and Bathing.**
- Select each type of care provided and tap **'Select'** at the bottom of the screen.
- Enter any relevant notes (optional).
- Tap **'Submit'** to complete tracking the care provided.
