

# Fall Management Overview

We're so excited to share that soon our community will be introducing Sage Detect, a thoughtful new technology designed to keep residents safer, more supported, and living with greater peace of mind every single day.

## Continuous Fall Detection

Sage Detect is a fall management system that will alert care teams in the event of a fall.

## Faster Response Times

With Sage Detect, care teams are able to prioritize uniquely identified alerts - reducing time on the ground or possible ER visits.

## Privacy Built-In

Sage Detect uses a camera in the room to detect someone on the ground. No audio is recorded and no one can access or "drop in" on the camera feed.

## Completely Optional

You must provide a consent form in order to activate Sage Detect. A Sage Detect device will be installed in each unit as part of the broader installation of the system, however the camera will be covered and not activated until the system is live and the community receives your consent.
